Profile

As a highly motivated student with a background in scientific studies, having obtained a Baccalaureate degree in the C series, I am passionate about information technology and have been actively pursuing my interest through self-study and practical projects.

Although I am still in the process of completing my education, I have gained practical experience in information systems administration through solo projects, including (My Portfolio website, Grade Management Application). These projects have allowed me to develop proficiency in programming languages such as HTML, CSS, JAVASCRIPT, PASCAL, SQL, database management, and network administration.

I am eager to continue developing my knowledge and skills in the field of information technology and am open to new challenges and opportunities. I am a strong communicator and work well in teams, always striving for excellence and finding innovative solutions to problems.
